Highlights of AutoCAD 2015 Here is the list of features and improvements introduced by AutoCAD 2015. A: Added features to CAD elements: User-defined plot symbols – In AutoCAD 2015, plot symbols can now be associated with CAD elements. Instead of having to define your own symbols, you can simply select from the predefined Symbols and Plots categories that are associated with the element. You can also assign the symbols to an element during the creation of the drawing or after the element has been created. Enhanced radar display – Radar shapes can now be defined in the drawing environment. When selected, the radar shows the reference line, but no data values. Radar values can be changed during the drawing or after the drawing has been created. Enhanced layer highlighting – Highlights are added to lines and blocks in the drawing when the geometry is selected. Choose your units – The format of the units used to define lengths and angles in the drawing can be changed from imperial to metric or vice versa. This gives you the flexibility to adjust the units to your preferences. Improvements to finished components – You can select any component as the

What's New in the AutoCAD?

Drawing tool preset profiles that are specific to the new design environment are included in AutoCAD 2023. This is new, in AutoCAD, and is an opportunity to modify how you draw at specific times, such as when you use the pen tool to change the drawing. The setting is found in the Drawing User Preferences dialog box. (video: 1:35 min.) You can share your drawing history from one desktop to another. This allows you to keep your changes from one drawing session on one computer and use them on another computer. You can do this by connecting to the internet, or by using a USB flash drive or other removable media. (video: 1:35 min.) With the improved drawing performance, the speed of drawing has been enhanced. (video: 1:48 min.) Enhanced Drawing with the Pen: You can easily enlarge, draw, or redraw selected objects by using the pen tool. You can use the pen tool with the new feature, drawing assist, and create a 2D polyline from a 2D path. You can use the pen to edit curves and spline objects, and get a freehand signature. You can even adjust line thickness and color for the pen. (video: 2:05 min.) Pen tool: The pen tool enables you to draw and erase existing objects, create complex shapes, and draw custom freehand lines. You can use the pen to edit curves and spline objects, and get a freehand signature. Drawing assist: Drawing assist makes it easier to draw shapes and edit your work. For example, you can create a 2D polyline from a 2D path, and use the pen tool to add and edit paths. Drawing assist provides greater control over the path. You can draw by dragging in any direction, or use other tools, such as the pen. Drawing outlines: You can use the pen tool and drawing assist to create a line. You can use the pen to edit the width of the line, and create a closed or open line. Geometry: You can use your system's default freehand pen width, or you can customize it using the drawing preference dialog box. You can also use the pen to edit curves and spline objects, and create freehand paths. (video: 2:17 min.) You can use the pen to edit paths and custom lines
